

Social Impact Management Guidelines Ver.2

Highlights and Key Points

October 2021
Social Impact Management Initiative (SIMI), Japan

Outline of the Guidelines

Chapter 1

Why of Social Impact

Chapter 2

What is Social Impact Management?

Chapter 3

Practicing Social Impact
Management

Basics

Chapter 4

Working with Impact Management Cycle

Chapter 5

Culture and Governance

Chapter 6

Steps in Social Impact
Management

Practice

Principles for Social Impact Intention

Regardless of our differences in positions and roles in society, we collectively aim to create a better society by engaging in projects and activities with the following social impact intention.

Develop and improve businesses with an emphasis on social impact

We commit to actively working with or supporting businesses that prioritize social impact. We articulate logical path, time horizon, and resources required for problem-solving and value creation from a long-term perspective. We also evaluate the social impact and implement the PDCA cycle.

Work in collaboration with diverse entities

We commit to facilitating collaborations across industries and fields among non-profit organizations, corporations, funders, intermediaries, individual citizens and governments to bring together knowledge, experience, technology and other assets for problem-solving and value creation.

Disseminate business models for scale

We commit to creating business models that can be replicated in other locations and sectors through active communication and sharing the knowledge gained from individual initiatives. We will scale good practices and increase social impact.

Why of Social Impact Management

Conducting social impact management fulfills the following purposes:

1	Better decision-making and improvement	To generate better decision making and business improvement (decision making and improvement) by learning from the changes and values created by projects and initiatives.

- Promoting participation of projects and initiat improvement process
- To enable stakeholders to obtain information on the progress and social impact of projects and initiatives, and to participate in decision-making and improvement processes.
- Contribution to problem solving and value creation

To advance social problem-solving and value creation, and to contribute to knowledge building for these purposes.

Practicing Social Impact Management

Practicing Social Impact Management is to work on the Impact Management Cycle, which consists of 4 stages and 1 element that supports all stages.

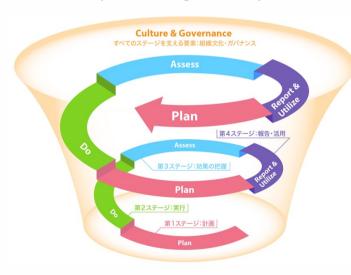

Stage 1	Plan
Stage 2	Do
Stage 3	Assess
Stage 4	Report & Utilize

One element that supports all stages: Culture & Governance

Practicing Social Impact Management

Three characteristics of the Impact Management Cycle

1. Applying evaluation

It is essential to have a clear intention and practice to make decisions based on solid impact information and to utilize them to the improvement of projects and initiatives.

2. From cycle to spiral

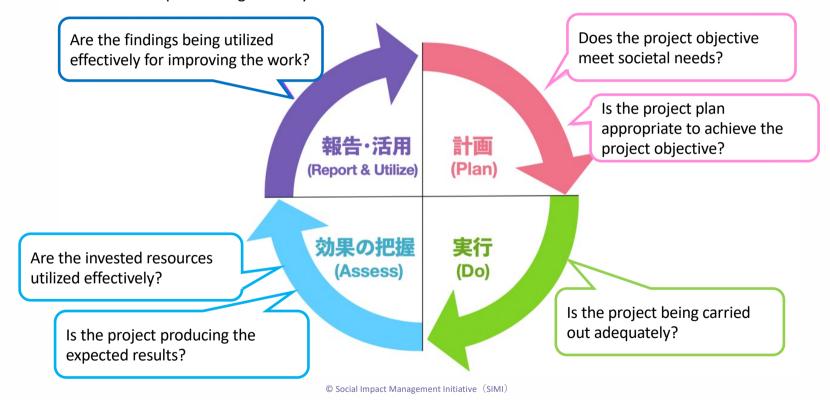

In some cases, it is important to think of multiple projects as a unit, or to expand the number of organizations and people involved, in order to develop projects and initiatives that address root cause of the issue at hand. The impact management cycle is not one project cycle, but rather a progression of cycles (i.e., spiral) for problem-solving and value creation with a comprehensive approach.

3. Importance of corporate culture and governance

In order to expand the spiral, organizations' capacity needs to be enhanced. Specifically, fostering a corporate culture and improving governance with impact at the center are two important components.

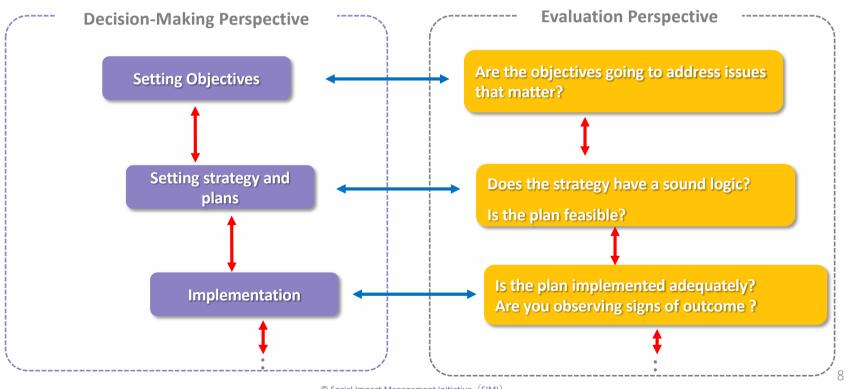

Evaluation for Social Impact

Any projects or initiatives, stand-alone or collective efforts, that aim to solve problems or create value need to answer the questions related to design logic and validity of the implementation process. These evaluation questions are embedded in the impact management cycle.

Alternating between the two perspectives

In the Social Impact Management process, you will need to incorporate the two distinct perspectives, work on an iterative process to hop from one perspective to the other and repeat the process, so that decision-making at each step is informed by evaluative judgment.

Going through the Steps for STAGE 1: Plan

STEP I Setting goals of social impact management

STEP2 Problem analysis and identifying issues

STEP3 Strategy setting and vetting

STEP4 Develop project plan and evaluation plan

Decision-Making Perspective

Clarify the organizational mission and objectives of the organization

Identify the issues you need to solve and the value you want to create

Define and verify strategy for problemsolving and value creation

Determine the best way to evaluate the outcome and process of the project

Evaluation Perspective

Determine if the organization's objective is socially meaningful

Determine the importance of the issues and value identified

Develop a theory of change or logic model and test if the strategy is sound and adequate

Develop the evaluation design and verify its appropriateness

Going through the Steps for STAGES 2, 3, 4

Decision-Making Perspective

Evaluation Perspective

STAGE 2: Do

STEP5 Implementation and monitoring

Assess the project progress, and review the strategy and plan as needed.

Monitor and evaluate the status of the project (process and outcome) and verify progress

STAGE 3: Assess

STEP6 Data analysis

Identify the final outcome of the project or initiative

Validate the final outcome of the project or initiative

STAGE 4: Report & Utilize

STEP7 Reporting and utilization

Prepare a clear and easy-to-understand report

Prepare a report that fully discloses the basis of factual identification and value judgment
